

Automated Recognition & Classification of Trading Cards

Presentation of the Unassisted project

Jakub Adamec

Czech Technical University in Prague

Faculty of Electrical Engineering

Department of Cybernetics

Machine Learning Group

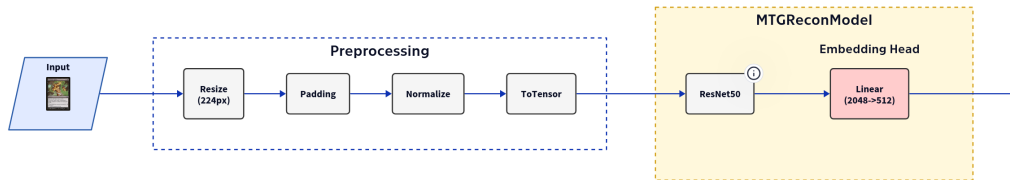

Problem:

- ▶ Manual sorting of trading cards (TCG) is time-consuming and prone to errors.
- ▶ Existing commercial solutions (e.g., CardBot) are proprietary and/or expensive.
- ▶ Many different similar cards. MTG has $>100k$ unique cards.

Objective of the work

- ▶ Software: Recognition pipeline that recognizes cards even from poor-quality photos.
- ▶ Hardware: Affordable and widely available components (Arduino, stepper motors...).
- ▶ The entire project is FOSS and well documented so that it can serve as educational material.

Phase 1: Feature Extraction

Phase 2: Metric Learning & Retrieval
